## Assignment 4 (4p)

Find the stress resultants N,  $Q_z$ ,  $M_y$  and the displacement and rotation components u, w,  $\theta$  of the xz-plane cantilever beam of the figure according to the Timoshenko beam model. Problem parameters E, G, A,  $S_y = 0$  and  $I_{yy} = I$  are constants. Start with the generic equilibrium and constitutive equations for the beam model.
